STELLAR DATA RECOVERY COIMBATORE RECOVERED DATA FROM EXTERNAL HDD WITH FILE SYSTEM ERROR

The client, Abhijit Associate, a company located at Coimbatore, lost its critical documents. The 2.5 inch Seagate HDD had the model number SRD00F1, serial number NA430000000000. The external hard drive was used in a Windows computer to store important documents.

The drive when connected to a computer requested for formatting in order to operate. The client did not want to format the HDD lose its stored data. Instead, the client preferred to recover data prior to formatting.

CLIENT'S APPROACH

A representative from Abhijit Associates came to [Stellar Data Recovery Coimbatore](#) for data recovery. The representative told our executive that the storage medium was asking to be formatted, leading to data loss.

We, Coimbatore data recovery team, received the affected hard drive for diagnosis.

DATA RECOVERY FROM FILE SYSTEM ERROR

DIAGNOSIS

After obtaining the external hard disk drive, our data recovery engineers at the outlet diagnosed the issue with the following conclusion. The storage medium had file system error, which results in data loss. It also has bad sectors resulting in corruption of few files.

SOLUTION

To resolve the issue, the engineer created full image of the defective media. Normally, due to corrupt file system the partition could not be opened. Using our proprietary software, we deep scanned to reveal original partition structure.

The engineer then previewed the partition and found few recovered files (some Excel files). Using our powerful repair software, the corrupt files were successfully repaired.

We recovered the data and, repaired the corrupted files. The required documents were recovered in good condition. The successful resolution news was conveyed to the client.

CLIENT'S RESPONSE

Our client, Abhijit Associates, was satisfied as all the data was recovered within a short time. The client provided us with the note "Service is very nice".
